As a professional driver, the traffic and weather services offered on satellite radio are a big help in the planning of trip routes, especially where safety is concerned. By limiting access to these services, you greatly increase the risk of accidents, and delays. It also contributes to traffic slow downs and delays when we truckers can't find out about construction, accidents and possible delays and go around them. This is a greed oriented move that could get a lot of harmful things done. This is a very BAD idea.
